

# Cézanne DotFinder

Dot-to-dot Scanning Software

## DotFinder—Powerful copydot scanning support for today's digital workflow

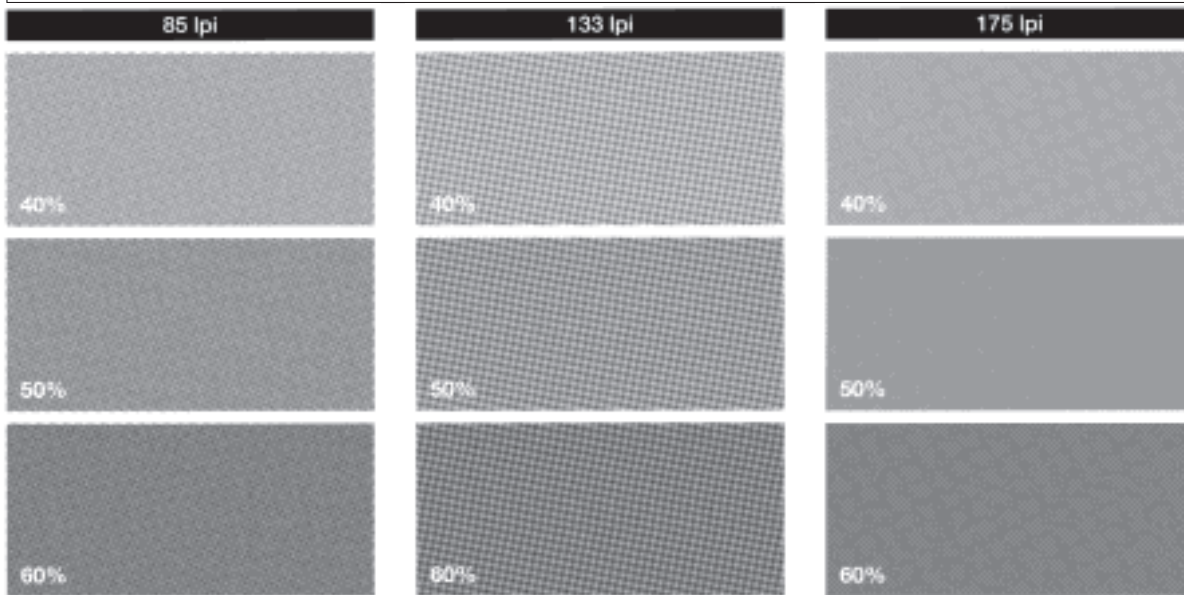

DotFinder software extends the capabilities of the Cézanne scanner's ColorScope Pro 3 software, enabling scanning of transparent separation films.

By converting films to data, images can be integrated into a digital workflow environment for data transfer or re-output in CTP systems. Digitizing films also reduces the need for large amounts of film storage space.

### Features

- 1,200 or 2,400 dpi resolution scanning of originals up to A3 wide 330 x 530 mm (12.9 x 20.8 in.), the same size as for line-art scanning.
  - A4 size four-color separation originals can be scanned at 1,200 dpi in approx. 20 minutes or at 2,400 dpi in approx. 40 minutes on a Power Macintosh G3/266.
  - Registration is done with the same pin-bar system used for line-art.
  - Supports a range of output formats including EPS(DCS) and TaigaSPACE
- TIFF, EPS(DCS) can also be output as compressed CCITT G4.
- DotFinder also features a simulation/adjustment function. By using the simulation function, the scanned image can be viewed in detail section by section while dot percentage values are displayed. Also in the simulation mode, setup parameters can be adjusted and their effects confirmed on screen.
  - Available as an option for the Cézanne, DotFinder is compatible with ColorScope Pro 3 Ver.1.2 or later.
